

OmniCase Goes Up, Up and Away!

OmniCase cranks up to bring innovation to wind power service technicians in Texas

Industry comes to OmniCase with problems and gets solutions. Wind power technicians needed a better way to get equipment to the turbine service areas, sometimes up to 30 stories above ground level. OmniCase developers designed a case for TorkWorx, for hoisting a whopping 167 pounds of test equipment and tools in a single SKB case.

Since space at the top prohibits a multicase solution, a tough SKB case was chosen for the perfect "everything fits" size. The case is rigged with a removable hard tray, layers of protective foam inserts, and lifting rings to specifically address the customer's needs. Precision machined compartments in the foam keep the equipment in order, and guard against movement and damage in transit. The unique hoisting rings Omni installs on the case exteriors facilitate cabling attachments to hoist the case from ground level to the staging area.

Need a solution for your unique requirements? Call OmniCase.
